

Keep Your Chicken Coop Smelling Fresh

Here are five quick tips to help you keep your chicken coop smelling fresh. If your coop makes you hold your breath when you go in to collect eggs, think about how the chickens feel! It's not too hard to keep the coop clean and fresh, if you do a little bit of cleaning every few days. I am listing a few important basics for you.

Keep Your Chicken Coop Smelling Fresh with These 5 Tips

1. **Water and moisture are not your friend.** If you slop or spill water when filling the water founts or bowls, the moisture will mix with the droppings and create a bad ammonia odor. The best way to keep this from piling up is to clean up any spills as they happen. We had to switch to a fount style waterer instead of a bowl because we had one duck in with the chickens and she thought we were giving her a small swimming pool each evening. Mrs. Duck could still get enough water to dip her bill in with the water fount. And there was less mess to cleanup in the morning. Now that the ducks are housed separately, we have returned to using the [flexible rubber feed pans](#) for the water bowl in the chicken coop.

2. **Install a box fan to keep air circulating.** Stagnant air smells bad and the flies will accumulate more in a stuffy airless building. Running a fan, even on low speed, will keep the flies, and the odor to a minimum. Not to mention that it keeps the coop from becoming too hot, also. We hang an inexpensive box unit over the coop doorway. You can read more about that [here, in my heat stress post](#). Installing a fan is one of the easiest ways to keep your chicken coop smelling fresh.

3. **Use fresh herbs and rose petals** if you have them, in the nesting boxes and in the sleeping areas. Not only will the herbs and petals smell great, the hens will appreciate the yummy treat. Mint is another great addition and it will help repel pests too. Check out more about using herbs in your nesting boxes. Another good source for chicken information is [here's a link to a great post about using herbs in your coop](#).

4. **Every few days or once a week, clean out any bedding that is soiled or damp.** We use hay or straw in the nesting

boxes. Straw is preferred because it is low in moisture, which is optimal for keeping odor at a minimum. Occasionally we have to use hay because we are out of straw. I try to use the driest hay bale I can find that is not dusty or moldy. The chickens will track in some wet mud, or occasionally an egg breaks, in the nests. The bedding is thrown out in the chicken yard for them to peck through before it is added to the compost pile. Sprinkle some Diatomaceous Earth powder under the fresh hay or straw to absorb moisture and odors.

5. Two or three times a year, completely clean out the bedding on the coop floor. Sometimes we use the deep litter method of coop bedding. This means that we continue to add fresh bedding or shavings as needed to the coop and only remove the damp/wet or soiled bedding on the floor as needed. In the winter this adds to the warmth of the coop by keeping the decomposing litter and feces in the building. Decomposing matter creates heat. We keep less litter and shavings in the coop during the hot months of summer to keep it cooler.

Keeping chickens happy and smelling good is not a full time job and doesn't need to be. Maintain a dry environment and you will be able to keep your chicken coop will be smelling fresh.
